

Patient: Tony, R.
Location: New Brunswick, NJ
Diagnosis: Osteoarthritis, Post-Op Pain

I recently underwent arthroplasty (hip replacement) surgery. I fell off a horse about 15 years ago and after a few minor accidents with my work (construction) I never fully recovered. My doctor prescribed NMES to help with recovery time and improve range of motion. Actually, I found it to alleviate pain as good as my pain medication. I use the device everyday and while I am undergoing certain physical therapy movements.

*Thanks,
Tony*
